ABOUT TRINIDAD AND TOBAGO’S INTEGRATED RESOURCE AND RESILIENCE PLAN

Trinidad and Tobago’s Integrated Resource and Resilience Plan (IRRP) will be a roadmap tailor-made for the nation’s energy needs while accounting for possible threats, such as extreme weather events, equipment failure and unpredictable loads. The aim of the IRRP is to ensure that T&T has a reliable, sustainable and resilient power supply that can bounce back from any challenges that should arise.

T&T’S ENERGY STATS

As the region’s largest oil and gas producer, T&T’s energy sector is heavily dependent on these resources. As of 2018, T&T’s energy profile is as follows:

- **1%** Natural Gas
- **99%** Fuel Oil

T&T’S ENERGY PLANNING NEEDS

T&T’s IRRP will seek to address the following needs:

- **Stability & Energy Efficiency** With a comparatively high demand for industrial power, continued reliable and affordable power services are critical.
- **Diversification** The inclusion of renewable energy alternatives without negatively affecting primary energy resources.
- **Resilience** Preparations for the impacts of natural disasters and various effects of climate change.
